

DIS supply a wide range of metallic, composite and soft blanket insulation solutions for the automotive market. Early engagement at the planning and design stage is encouraged in order to optimise the benefits of up to the minute heat management insulation technology.

Predominantly serving the high performance vehicle sector, thermal solutions are available in a wide range of types, styles, thicknesses and density depending upon the aesthetic and functional requirement. Thermal barriers or heat shields can be supplied as detachable components or as integral solutions. Using state of the art technology and a choice of numerous materials, applications in excess of 1000°C can be addressed depending upon the specification. Typical applications include;

- Bulkhead insulation
- High temperature manifold insulation
- Turbo insulation
- Exhaust insulation
- Catalyst insulation
- Brake feed insulation
- Bonnet insulation

We have established B16949 automotive standard approval to manufacture within the automotive industry. We have the ability to design from concept, working with powertrain engineers supporting road testing.

In summary, our proven record of supplying quality insulation components for the high performance, rally and racing car industry is considered exemplary, using quick turnaround production in recognition of often fast-track requirements.
